

## **AMENDMENTS TO THE CLAIMS**

### **1-28. (Canceled)**

**29. (New)** A kit for building a structure which includes a plurality of panels,

wherein each panel is made from flexible sheet material having at least one respective peripheral formation which is formed by an inflatable section of the sheet material and a plurality of fasteners to secure the panels together,

wherein each panel includes a region of flexible sheet material and an inflatable tubular section of sheet material which extends around the region to form a continuous peripheral formation of the panel,

wherein each fastener includes a body which is made from a resiliently deformable plastics material and which is formed with two arcuate sections which respectively define clip formations, and

wherein the clip formations of a fastener are respectively engageable with the peripheral formations of two of the panels which are positioned adjacent each other, to secure the panels together.

**30. (New)** A kit according to claim 29, wherein, in each panel, the region extends from the inflatable tubular section at a location, which viewed in plan and cross section, is off-center.

**31. (New)** A kit according to claim 29, wherein, in each fastener, the arcuate sections are joined each other at a central region.

**32. (New)** A kit according to claim 31, wherein the central region is linear.

**33. (New)** A kit according to claim 31, wherein each arcuate section defines a mouth between an end of the arcuate section and an end of the central region.

**34. (New)** A kit according to claim 33, wherein the mouth extends in an angular sense through an angle which is less than  $120^{\circ}$ .

**35. (New)** A kit according to claim 29, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .

**36. (New)** A kit according to claim 30, wherein, in each fastener, the arcuate sections are joined each other at a central region.

**37. (New)** A kit according to claim 32, wherein each arcuate section defines a mouth between an end of the arcuate section and an end of the central region.

**38. (New)** A kit according to claim 30, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .

**39. (New)** A kit according to claim 31, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .

**40. (New)** A kit according to claim 32, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .

**41. (New)** A kit according to claim 33, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .

**42. (New)** A kit according to claim 34, wherein, in each fastener, each arcuate section extends along a substantial portion of a circular path through an angle in excess of  $180^{\circ}$ .
